

AP 107 – Go Sign Client Support and Release Policy

TIPS CG – 21 OCTOBER 2025

- ❑ **Action point:** 4CB to check with vendor to see whether the version build number could be part of the filename.
- ❑ **Follow up with vendor:** Ascertia will release next versions of GSD clients introducing 4 digits version instead of 3 digits. The build number will be conveyed in the fourth digit.

8.3.6.XYZ

- ❑ **Limitation:** version number is only visible after GSD installation, not included in the filename without any action from 4CB.
- ❑ **Workaround:** comparison of hash code provided by 4CB with the one associated to the file but download is anyway needed and associated NSP cost must be faced.

❖ **New approach : Introducing the version number in the filename.**

- ❑ **Option 1:** ESMIG portal static link to the GSD application will be manually changed whenever a new version is available. It requires a new deployment of the ESMIG Portal with a correspondent downtime during the installation. Major impact on TIPS GUI that should be available 24/7.
- ❑ **Option 2:** introducing a dynamic mechanism that changes the ESMIG portal label of the link based on the current version of GSD client. New development is required, and a Change Request should be raised.

Evaluation of cost/benefit of both options is strongly suggested.

Thank you for the attention!
